# BIRDIE'S CHIRP

Birdie's Chirp is a series of asymmetric co-op party games where players in a room work with a Tilt5 player in a separate room, sharing information to solve challenges.

The project explores cross-platform communication through different perspectives of the same space, a magical forest setting. The room players' movements are tracked through synced Orbbec 3D cameras and reflected in the Tilt5's virtual bird's-eye view, allowing the Tilt5 player to see and cooperate with the players from a different perspective.

The magical forest setting and cute character emphasize the Warmth of Cooperation and Vivid Interactivity at the heart of the experience.
